The Mosquito Abatement Department utilizes various trapping techniques to capture mosquitoes for viral testing. We are currently sending mosquito pools to the Utah Public Health Laboratory in Taylorsville Utah. A mosquito pool is 10-100 mosquitoes in a 2ml tube. We trap mosquitoes on Monday nights and the following morning we separate species in order to locate our vector species for testing. Tests are then sent out Tuesday afternoon. We do not receive our test results until Friday evenings. We use the trapping data to determine the truck mounted spray routes for the week. Below you will find the truck mounted spray routes for the week.

Weekly Truck Mounted Spray Route

Community	Driver Assigned
Lapoint-Ft. Duchese	Dion Martinez
Ouray-Randlett	Willie Knight
Indian Bench– Hilltop	Sterling Tabbee
Arcadia	Dion Martinez
WhiteRocks	Sterling Tabbee
Myton, Friday-Sunday	Willie Knight
